CSE471 : System Analysis and Design
Lab Assignment on API Postman Collection

Project Title : ShebaConnect - An Integrated Government Service Navigation & Assistance Platform

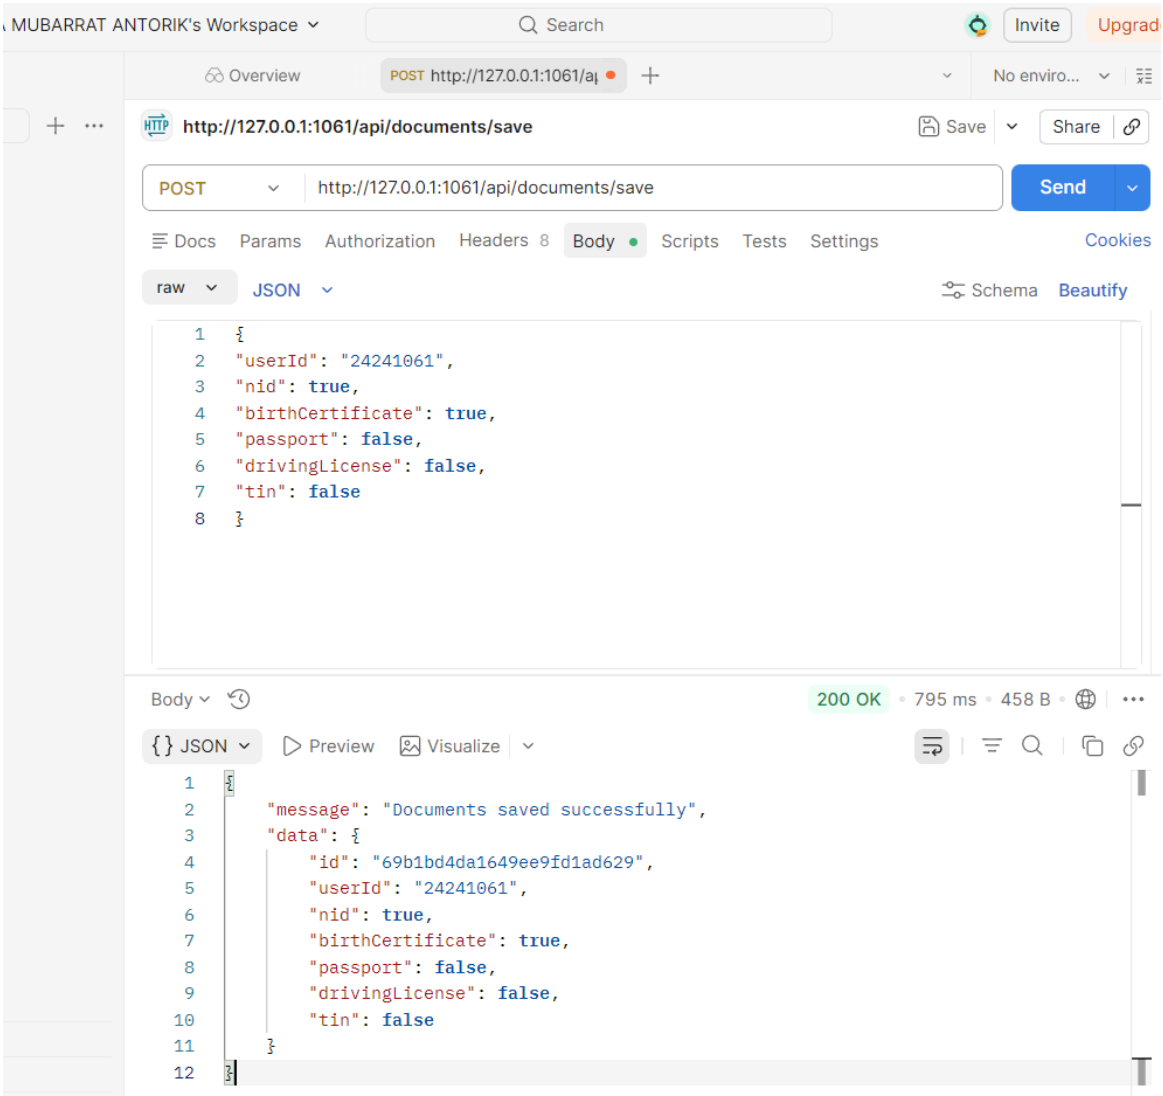
Group Number : 06
Backend Framework : Node.js + Express.js

Submitted by : Muntaka Mubarrat Antorik
Student ID : 24241061
Section: 05

Date : 14/03/2026

APIs of Feature - 01

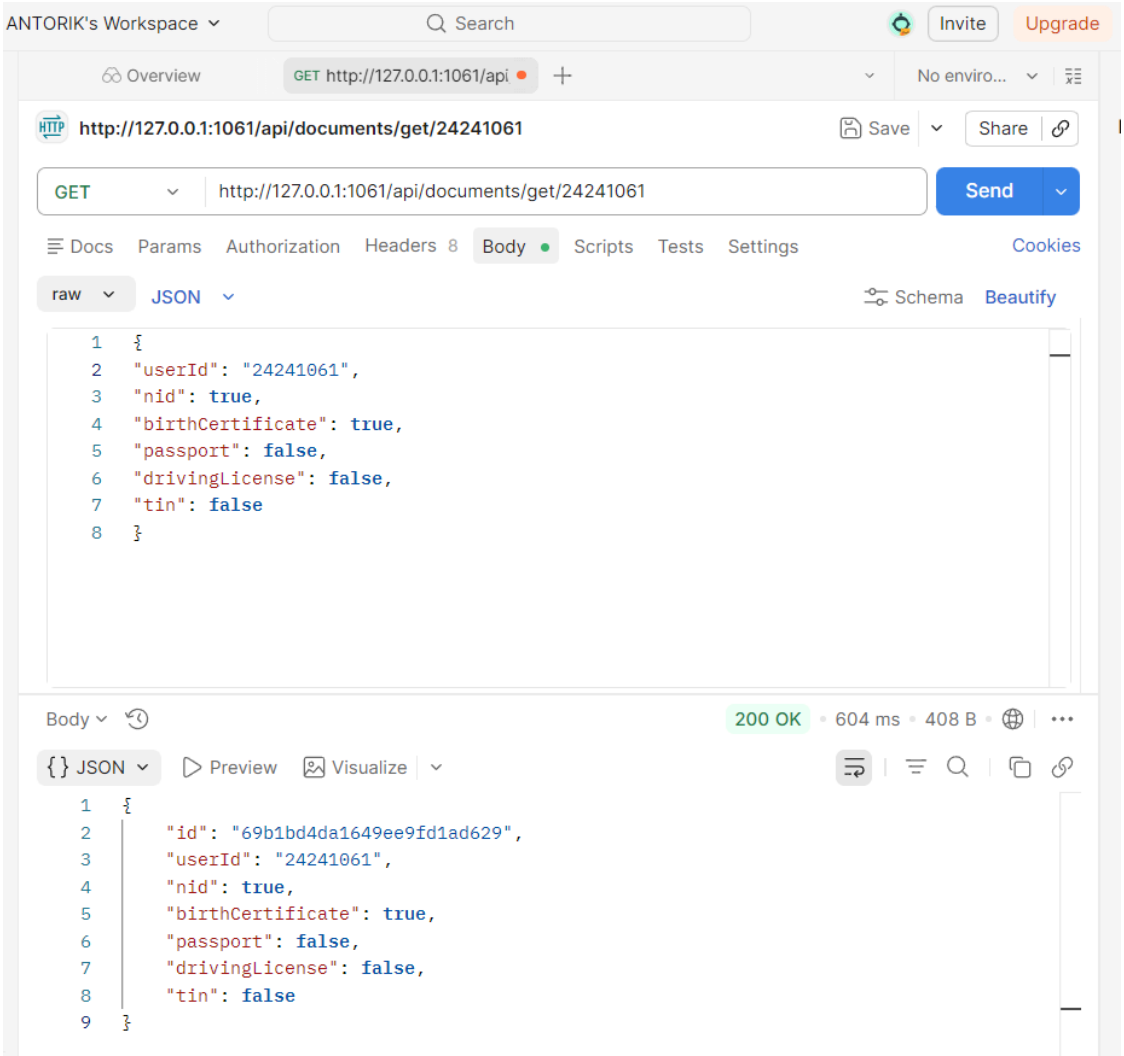
```
39
40 app.post("/api/documents/save", async (req, res) => {
41
42   try {
43
44     const { userId, nid, birthCertificate, passport, drivingLicense, tin } = req.body;
45
46     const doc = await prisma.documents.create({
47       data: {
48         userId,
49         nid,
50         birthCertificate,
51         passport,
52         drivingLicense,
53         tin
54       }
55     });
56
57     res.json({
58       message: "Documents saved successfully",
59       data: doc
60     });
61
62   } catch (error) {
63
64     res.status(500).json({
65       error: error.message
66     });
67
68   }
69
```



- Endpoint URL: http://127.0.0.1:1061/api/documents/save
- HTTP Method: POST
- Headers: Content-Type: application/json
- Body: {"userId": "24241061",
  "nid": true,
  "birthCertificate": true,
  "passport": false,
  "drivingLicense": false,
  "tin": false}

APIs of Feature - 01.01

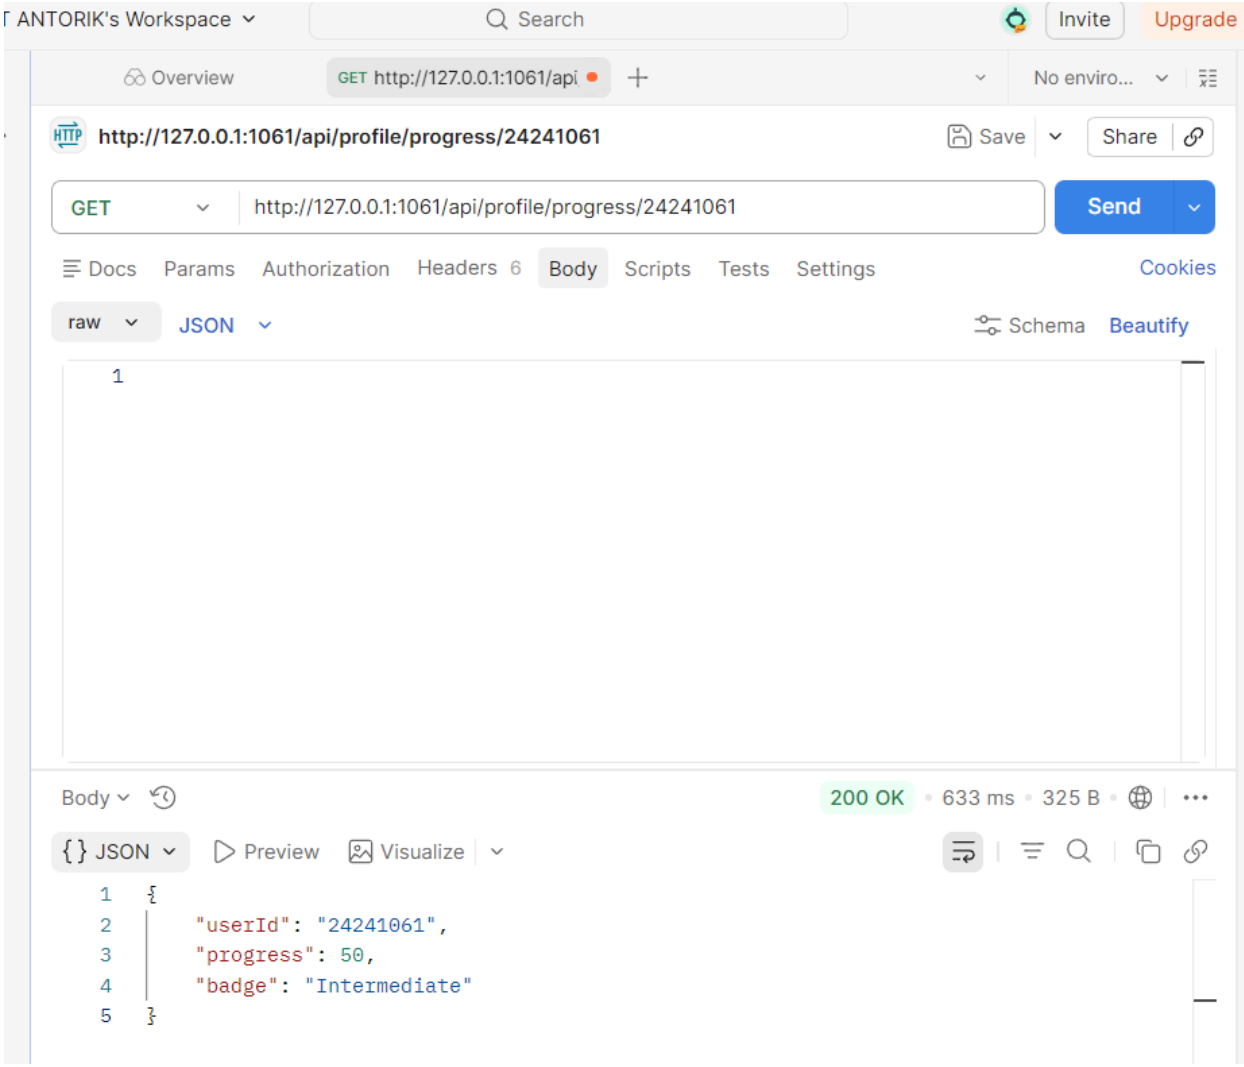
```
72  app.get("/api/documents/get/:userId", async (req, res) => {
73
74    try {
75
76      const userId = req.params.userId;
77
78      const docs = await prisma.documents.findFirst({
79        where: { userId: userId }
80      });
81
82      res.json(docs);
83
84    } catch (error) {
85
86      res.status(500).json({
87        error: error.message
88      });
89
90    }
91
92  });
93
```



- Endpoint URL: http://127.0.0.1:1061/api/documents/get/24241061
- HTTP Method: GET
- Headers: None
- Body: None

APIs of Feature - 02

```
96  app.get("/api/profile/progress/:userId", async (req, res) => {
97
98    try {
99
100     const userId = req.params.userId;
101
102     const docs = await prisma.documents.findFirst({
103       where: { userId: userId }
104     });
105
106     if(!docs){
107       return res.status(404).json({ message: "User not found" });
108     }
109
110     let count = 0;
111
112     if(docs.nid) count++;
113     if(docs.birthCertificate) count++;
114     if(docs.passport) count++;
115     if(docs.drivingLicense) count++;
116
117     const progress = count * 25;
118
119     let badge = "Starter";
120
121     if(progress >= 50) badge = "Intermediate";
122     if(progress >= 75) badge = "Advanced";
123     if(progress === 100) badge = "Service Ready";
124
125     res.json({
126       userId,
127       progress,
```

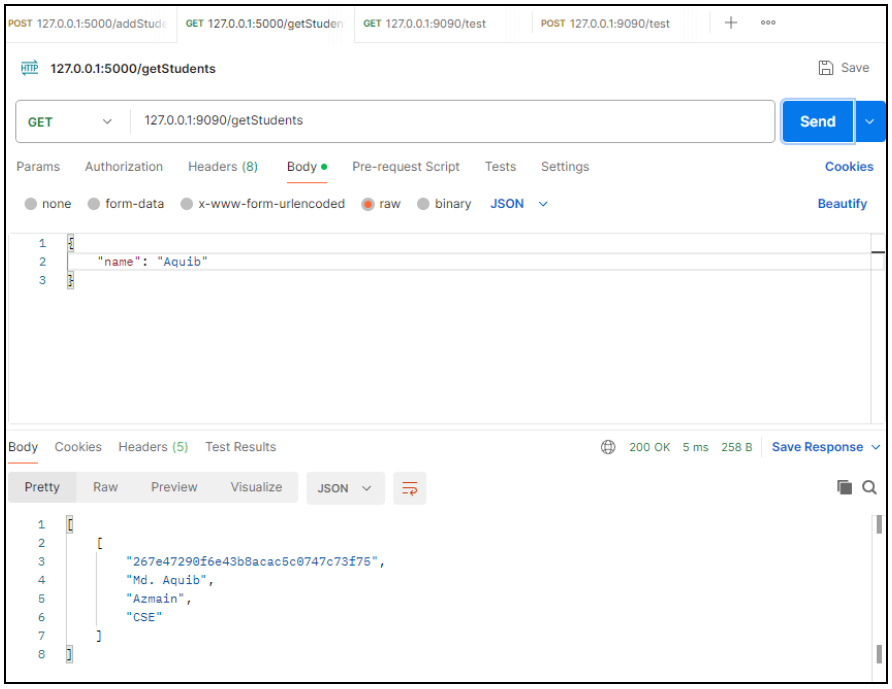


- Endpoint URL: http://127.0.0.1:1061/api/profile/progress/24241061
- HTTP Method: GET
- Headers: None
- Body: None

Instruction:

1. You have to develop all the REST APIs/Endpoints of two features (which interfaces you have submitted in the Figma assignment) of your project using your preferred backend framework. Database must be connected.
2. Each API description will include:
    - Endpoint URL (e.g., https://api.example.com/users)
    - HTTP Method (GET, POST, PUT, DELETE, etc.)
    - Headers (like Content-Type or Authorization)
    - Body/Parameters (data to send with request)
3. This is an individual submission. The developed APIs can not be duplicated among group members.
4. Add a code snippet for each API.
5. Run a backend server on a specific port. The port number should be the **last four digits of your student id**.
6. Test your developed API in Postman. Add a screenshot for each API.
7. For example:

```
@app.route('/getStudents', methods=['GET'])
def getStudents():
    c = sqlite3.connect("student.db").cursor()
    c.execute("SELECT * FROM STUDENTS")
    data = c.fetchall()
    return data
```



- Endpoint URL: 127.0.0.1:9090/getStudetns
- HTTP Method: Get
- Headers: None
- Body: {“name” : “Aquib”}
